

# Presto® Connector for HP SOA Systinet

## Enterprise Mashup Confidence through Service Registry Integration

Forward-thinking organizations are adopting a service-oriented architecture (SOA) to drive business growth and innovation. These organizations are ready for increased SOA ROI with Enterprise Mashups. Enterprise Mashup solutions can put SOA-based dynamic data integration in the hands of knowledge workers and developers to improve decision speed and business results.

JackBe's participation in HP's Governance Interoperability Framework (GIF) led to the development of a solution that connects JackBe's enterprise mashup platform, Presto, to HP's SOA Systinet registry. The solution offers mashup users easy and secure access to service registry assets and offers IT organizations a fast path to increased SOA ROI.

### SOA Service Visibility, Trust, and Control for Mashups

JackBe's Enterprise Mashup platform, Presto, is the most complete solution for creating enterprise mashups. Presto consists of the Presto Mashup Server, an enterprise mashup server for accessing, mashing, and managing internal and external data and information processes, Presto Wires Visual Mashup Composer, for creating mashups in an intuitive drag-and-drop manner, and Mashup Connectors for rapid integration with your existing enterprise interface and IT infrastructure.

JackBe's partnership with HP Systinet **means Presto users can safely create mashups from their organization's SOA.** The Presto Connector for HP SOA Systinet, a GIF-compliant interface, automates the sharing of SOA service information between HP Systinet and JackBe's award-winning enterprise mashup platform, Presto. The Presto Connector for HP SOA Systinet increases business empowerment through

Increase ROI of your SOA by expanding use of your services through mashups.

Rapidly deployed governed services to Enterprise Mashup users.

Mashup confidently with integrated service lifecycle management and SOA governance.

secure mashups that access valuable enterprise data while meeting IT requirements and standards.

Presto's integration into one of the industry's leading enterprise SOA solutions means IT architects, developers, and application managers are now able to perform the following with the Presto Connector for HP Systinet:

- View, select, and import registry services into Presto immediately or in a scheduled batch mode;
- Proactively assess and manage service lifecycle impacts to production Presto mashups;
- Quickly deploy pre-production services to the Presto environment for easy testing and verification.

The integration of HP Systinet and Presto directly benefits the business as new sources of data can be quickly and confidently provided to appropriate developers and business users for use in their mashup applications. Equally important, the Presto Connector for HP SOA Systinet benefits IT organizations as they can greatly improve the ROI of SOA efforts by expanding the uses of SOA-based services within the enterprise while still meeting internal application governance requirements.

*"HP SOA Systinet allows customers the visibility, trust and control they need to realize successful business outcomes with their SOA transformations. As the SOA market continues to mature, we are very excited that JackBe's Presto is now an integrated part of that value chain."*

## About JackBe

JackBe delivers trusted enterprise mashup software that empowers organizations to create, customize and collaborate through enterprise mashups for faster decisions and better decisions. Our innovative Enterprise Mashup platform, Presto, provides dynamic mashups that leverage internal and external data while meeting the toughest enterprise security and governance requirements. Presto provides enterprise mashups delivered to the user in 3 clicks versus 3 months.
